

**Letter of Intent to Collaborate with NABDA on the Pilot Rollout of a Genomics, Biobanking, and AI-Integrated Healthcare Platform**

To:  
The Honourable Minister  
Federal Ministry of Science, Technology & Innovation  
Abuja, Nigeria

Dear Honourable Minister,

We write to express our formal intent to collaborate with the Federal Ministry of Science, Technology and Innovation, in partnership with the National Biotechnology Development Agency (NABDA) and the Department of Health and Biomedical Sciences, on a strategic pilot program to integrate genomics, biobanking, and AI into a unified digital healthcare platform.

Forric Technologies Ltd. is the developer of MeddyPal, a modular health system built to support intelligent, population-scale healthcare delivery. We are seeking to enter a Technical Collaboration Agreement (TCA) with NABDA, under the Ministry's oversight, to launch a national pilot that brings genomics sampling, biobanking infrastructure, and AI-powered analytics Utilising MeddyPal's existing architecture.

The pilot will serve as a proof-of-concept for population-level health intelligence, beginning with a focus on maternal and early-life care. It is expected to draw support from institutional mechanisms such as the MAMA Fund, leveraging public sector coordination to demonstrate scalable innovation in biotechnology and digital health.

To move this forward, we respectfully request:

- The Ministry's review of our attached proposal,
- A date to formally present the initiative to NABDA and the Department of Health and Biomedical Sciences,
- Guidance on steps toward establishing a Memorandum of Understanding with the Ministry and NABDA.

We believe this collaboration will serve as a foundation for a nationally aligned, genomics-enabled healthcare infrastructure. We remain available to meet at your earliest convenience and appreciate your kind consideration.

Sincerely,  
Forric Technologies Ltd.
