

Letter of Intent to Collaborate with NABDA for Pilot Rollout of Genomics, Biobanking and AI-Integrated Healthcare Platform.

The Honourable Minister
Federal Ministry of Science, Technology & Innovation

And

The Director-General
National Biotechnology Development Agency (NABDA)
Abuja, Nigeria

Dear Honourable Minister and Director-General,

We write to express our formal intent to collaborate with the National Biotechnology Development Agency (NABDA) on a strategic initiative that aligns closely with your agency's mandate to promote biotechnology development and national bio-infrastructure.

Forric Technologies Ltd. is the developer of **MeddyPal**, a modular digital health platform designed to support access to health services through intelligent, scalable technology. We are seeking to partner with NABDA under a **Technical Collaboration Agreement (TCA)** to initiate a pilot program that integrates **genomics sampling, biobanking infrastructure, and AI-powered analytics** into MeddyPal's national healthcare platform.

The objective of this pilot is to serve as a proof-of-concept for deploying **population-scale genomic and AI capabilities**, starting with a focus on maternal and early-life healthcare. This pilot phase will be powered by NABDA's institutional leadership and supported via the **MAMA Fund**, leveraging public sector coordination to drive localized innovation and national health intelligence.

We respectfully request:

- NABDA's review of our attached proposal
- An invitation to commence formal discussions toward establishing a Technical Collaboration Agreement
- Support in accessing available public funding (e.g., MAMA Fund) to anchor the pilot phase

We believe NABDA's leadership is critical to ensuring this project meets national objectives and supports future biobank and genomic ecosystem development in Nigeria. We remain available to meet and discuss next steps at your earliest convenience.

Sincerely,
Forric Technologies Ltd.
